**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1, 3, 4, 5, 16, 18, 19 20, 21, 22, 24, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Easley (US 6599271) in view of Maaskamp (US 6149633) in further view of Ureche et al (US5167620). Easley discloses a device for preventing post occlusion flow surges during eye surgery comprising a tube, a filter housing coupled to the tube, a flow restrictor, and a filter (Abstract). Easley fails to explicitly disclose a flow restrictor with a diameter between 0.1 and 1.0 millimeter. Maaskamp teaches a flow control system for endoscopic surgeries comprising a flow restrictor attached by a luer coupling having a fixed internal diameter of about 1.5 mm or narrower or wider depending on the requirements of the device to maintain constant pressure in the system (Col. 4, lines 30-35). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify the device of Easley to be of the size specified by Maaskamp so that it can maintain optimum pressure characteristics.
3. Claims 1, 5, 16, 20 further differ from the teachings of Easley in view of Maaskamp in calling for the tube to have an inner diameter of between 1.5 and 2.5 mm. Ureche teaches an eye surgery device having a supply and aspiration lines that have an inside diameter of about 2 mm

to provide optimal delivery and aspiration characteristics for eye surgery. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify the device of Easley in view of Maaskamp to have tubes with internal diameters of about 2 mm as taught by Ureche to provide optimal delivery and aspiration characteristics for eye surgery.

***Response to Arguments***

4. Applicant's arguments filed 1/22/07 have been fully considered but they are not persuasive.
  
5. Applicant argues that there is no motivation to combine the teachings of Maaskamp with Easley. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the Maaskamp reference teaches that the flow restrictor has a specific diameter that can be adjusted to meet the needs of the particular system in which it is being used.

Conclusion

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
